**XI INTERNATIONAL SKOROBOHATKO
MATHEMATICAL CONFERENCE**

(October 26 – 30, 2020, Lviv, Ukraine)

ABSTRACTS

Lviv – 2020

Abstracts of XI International V.Skorobohatko Mathematical Conference are published. The new results in a few branches of mathematics relevant to interests of Prof. Vitaliy Skorobohatko (1927-1996) are presented. Tasks in the fields of ordinary differential equations and differential equations with partial derivatives are considered, problems in function theory, functional analysis, algebra and computational mathematics are analyzed. A number of applications to problems in mathematical physics and mechanics are developed.

Editorial board:

M. Bokalo (editor-in-chief), Z. Nytrebych (editor-in-chief), V. Pelykh (editor-in-chief), M. Symotyuk (editor-in-chief), O. Petruk (executive editor), V. Beshley, P. Kalenyuk, Kh. Kuchmins'ka, M. Kutniv, A. Kuz, V. Petrychkovych, N. Protsakh

Approved for publication by the Academic Council of Pidstryhach Institute for Applied Problems of Mechanics and Mathematics, National Academy of Sciences, Ukraine (prot. 7, 1.10.2020)

ON THE CONVERGENCE OF MULTIDIMENSIONAL S-FRACTIONS WITH INDEPENDENT VARIABLES

Let

$$1 + \prod_{k=1}^{\infty} \sum_{i_k=1}^{i_{k-1}} \frac{c_{i(k)} z_{i_k}}{1}, \quad (1)$$

where $z_{i_k} \in \mathbb{C}$, $i_k = 1, 2, \dots, N$; $c_{i(k)} > 0$, $i(k) \in \mathcal{I}$,

$$\mathcal{I} = \{i(k) = (i_1, i_2, \dots, i_k) : 1 \leq i_k \leq i_{k-1} \leq \dots \leq i_0; k \geq 1; i_0 = N\},$$

be a multidimensional S -fraction with independent variables, N is a fixed natural number.

Theorem. *Let the elements of a BCF (1) satisfy the conditions*

$$c_{i(k)} \leq c, \quad i(k) \in \mathcal{I}.$$

Then the multidimensional S -fraction with independent variables (1) converges uniformly on every compact subset K of

$$D = \left\{ \mathbf{z} \in \mathbb{C}^N \setminus \{0\} : -\frac{\pi}{2} < \arg z_N \leq \arg z_{N-1} \leq \dots \leq \arg z_1 < 0 \right\}$$

to a holomorphic function in D and the following truncation error bound holds

$$|f_m(\mathbf{z}) - f_{Nn}(\mathbf{z})| < D_N \left(\frac{\sqrt{\delta^2 + 4M} - \delta}{\sqrt{\delta^2 + 4M} + \delta} \right)^n, \quad m \geq Nn, \quad n \geq 1,$$

where $M = c \max_{\mathbf{z} \in K, 1 \leq m \leq N} |z_m|$, $\delta = \cos \left(\max_{\mathbf{z} \in K} |\arg z_N| \right)$,

$$D_1 = 2M/\delta, \quad D_r = 4(D_{r-1}S + M/\delta), \quad r = 2, \dots, N,$$

$$S = 1 + M\sqrt{M^2 + \delta^4} / \left(\delta^2 \left(\sqrt{M^2 + \delta^4} - M \right) \right).$$
